SPARKLING

- NEOBOND Sparkling panels provide an extraordinary solution which emphasizes the sophistication, charm and elegance of contemporary architecture, respectively outshining all other materials in its proximity. The exquisite notes, shimmering glow and sparkling metallic effects create a subtle and sophisticated impression.
- NEOBOND Sparkling panels can not just add a glamour and enchantment to architectural design of the facade, but also to create an amazing contrast in combination with other textures.

-
- Each colour in current colour chart is represented for display purposes only. Please check the actual colour accordance to your project with our sample.
 - Colour differences may occur between panels from different production batches. The entire required amount of material for the project must be ordered as one batch.
 - To avoid differences in gloss and reflection, composite panels have to be installed in the same direction, as indicated by the arrows on the protective film.
 - Product series available as NEOBOND, NEOBOND/FR, NEOBOND/A2 (colour variation may occur between different product types, due to different production processes. It is recommended not to mix different product types, if colour consistency is required).
